QIKO CORE

CRM product summary

Plain-English guide
30 October 2026
3 pages

Qiko Core is the sales home for the team. Every prospect lives in one record. The product then shows who needs a follow-up, and why.

WHAT IT DOES

- Collects people from Qiko Signal, the website, free scans, and leads you type in yourself.
- Joins those records by email, so one person is one lead.
- Shows sign-ups, scans, enquiries, and product use on the same timeline.
- Suggests the next action, and keeps the facts behind that suggestion.
- Lets you track tasks, notes, emails, and WhatsApp on the lead.

WHERE A LEAD COMES FROM

SOURCE	WHAT ARRIVES
Qiko Signal	Sign-up, logins, product use, free scans, and opened reports
Website	Contact form and assessment enquiries
Free audit	A finished website scan, with a score out of 100 and the findings
Manual entry	A lead you add by hand: name, email, phone, company, and role

SIGN IN

- Use a work email and a password of at least 8 characters.
- You can stay signed in. Forgot password shows a reset message on screen.
- The workspace stays locked until you sign in. Sign out is in the sidebar.
- This version does not check a real account. Any valid email and an 8-character password will open the demo.

Live in the menu

- **Home** — your day and priorities
- **Sales** — overview, leads, pipeline, actions
- **Ask Qiko** — Ctrl+K, or the sparkle button
- **Settings** — profile, team, and demo data

Shown, not built yet

- **Marketing** — campaigns and channels
- **Finance Ops** — revenue, payments, invoices
- **Qiko Pulse** — later AI insights
- These items say “Soon” and cannot be opened.

AROUND EVERY SCREEN

- The top search finds leads by name, company, or email.
- The bell lists overdue tasks and Qiko’s suggestions.
- The sidebar can collapse. On a phone it opens from the menu button.
- A small note in the sidebar says this is a demo workspace. Your edits stay in this browser.

Home and sales

Leads, pipeline, and one profile

HOME

- Opens with a greeting, today's date, and an Ask Qiko box with ready questions.
- **Your top priorities** — up to three groups, marked high or medium. Open a card to review the people and tasks inside it.
- **Tasks at a glance** — counts for pending, in progress, and completed, plus the next open tasks.
- **Jump back in** — Sales is the active workspace. Marketing, Finance Ops, and Pulse are marked Soon.
- **Recent activity** — the latest events, with the source and how long ago they happened.
- **What changed** — new leads this week, scans in the last 72 hours, deals won, and overdue tasks.

SALES OVERVIEW

- Six numbers you can click: total leads, Signal sign-ups, free scans, active users (last 30 days), new enquiries this week, and follow-ups due.
- Charts for daily sign-ups and completed scans. Switch between 7, 14, and 30 days.
- Pipeline counts for New, Contacted, Qualified, Won, and Lost.
- Leads split by source, the most engaged open leads, and suggested actions with their evidence.
- Buttons to add a lead, or to ask Qiko for today's summary.

Leads list

- Filter by status, source, owner, or activity.
- Activity filters: needs attention, has a scan, active in 30 days, has an open task, or unassigned.
- Search and sort by last activity, newest, engagement, or name.
- Export the filtered list to CSV.
- 15 leads per page. A row opens a quick panel. The name opens the full profile.
- Status and owner changes ask you to confirm first.

Pipeline board

- Five columns: New, Contacted, Qualified, Won, Lost.
- Drag a card to a new column. You confirm before the status changes.
- Same search and filters as the lead list.
- Each card shows company, source, owner, last activity, and engagement.

A lead also has a next action. That comes from a note you typed, an open task, or a Qiko suggestion.

ONE LEAD

- Header shows name, role, company, email, phone, source, status, and owner.
- Tabs: **Overview, Activity, Conversations, Scans and reports, Tasks, Notes.**
- Overview counts activity in 30 days, scans, reports opened, logins, and the last activity. It also shows an engagement score out of 100.
- Activity filters: All, Product, Scans, Enquiries, and CRM (status, owner, notes, tasks, and logged contact).
- Scans show the website, the score, and the findings. You can turn a scan into a follow-up task.
- You can edit email, phone, company, role, and the next action. A duplicate email is blocked.

QIKO CORE

Work, questions, and settings

Actions, Ask Qiko, and what is demo

TALKING TO A LEAD

- **Log interaction** — call, email, WhatsApp, meeting, or message. You can type the summary or speak it. A voice note is written into the box as you talk.
- **Email and WhatsApp** — the message is saved on the lead, then opened in your email app or WhatsApp.
- **Notes and tasks** — both stay on the profile. A new task can start from the lead, from a scan, or from a suggestion.
- The same email, WhatsApp, and log buttons are on the quick panel, so you do not have to open the full page.

ACTIONS

- Suggested actions sit at the top. You can accept, edit, or dismiss each one. Accepting it creates a task.
- A suggestion only appears when the lead is still open and has no task already.
- Reasons Qiko suggests a follow-up: a new Signal sign-up with no contact yet; a scan finished in the last 72 hours; a website enquiry waiting for a reply; strong product use in the last 3 days; a contacted or qualified lead with no follow-up for 7 days.
- Each card shows facts (what happened) and a short reason (what Qiko infers).
- The board has Pending, In progress, and Completed. You can also filter Overdue and Dismissed.
- Drag a task to move it. Switch to a list. Search, and filter by owner or priority (high, medium, low).
- Every task keeps a due date, an owner, a linked lead when there is one, the evidence, and a history of changes.

Ask Qiko

- Answers only from data already in this workspace.
- If it cannot match the question, it says so.
- You can ask about today, Signal sign-ups, scans, who to call first, pending tasks, the pipeline, or one person by name.
- Each answer lists the facts, a next step, and buttons you confirm before anything changes.
- Those buttons can create a task, update a status, or open a page.

Settings

- Change your display name. Email stays as you signed in.
- Add or remove teammates. They can own leads and tasks.
- You cannot remove yourself. Removing someone unassigns their leads and tasks.
- A data-sources list shows Signal, the website, Admin, the CRM store, and Pulse.
- Reset puts the original sample leads, notes, and tasks back.

WHAT THIS VERSION IS

READY TO USE	NOT LIVE YET
Sign-in, Home, Sales overview, lead list, pipeline board, lead profile, tasks, notes, email, WhatsApp, voice notes, suggestions, Ask Qiko, search, filters, CSV export, and notifications.	Live APIs for Qiko Signal, the website, and Admin. Qiko Pulse. Marketing. Finance Ops. A real password check.

All numbers on screen come from sample data saved in the browser. Reset in Settings restores the original set. Nothing in this version is a live customer feed.
